Du corps pur au mélange binaire

Diagramme de phase de l'eau

Construction d'un diagramme binaire phases miscibles

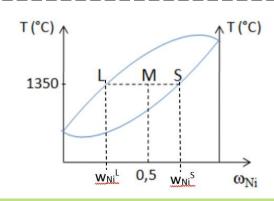

Théorème des moments chimiques

- $m_{Ni} = m_{Ni}^{liq} + m_{Ni}^{S} = w_{Ni}^{liq} \cdot m^{liq} + w_{Ni}^{S} \cdot m^{S}$
- $m_{Ni} = w_{Ni}$. mtot = w_{Ni} . (m^{liq} + m^S)

 $w_{Ni} \cdot (m^{liq} + m^{S}) = w_{Ni}^{liq} \cdot m^{liq} + w_{Ni}^{S} \cdot m^{S}$

$$m^{S}$$
. $(w_{Ni} - w_{Ni}^{S}) + m^{liq}$. $(w_{Ni} - w_{Ni}^{liq}) = 0$

Cas du mélange cuivre-Nikel

$$w_{Ni}^{S} = 0.8$$

 $w_{Ni}^{L} = 0.4$

Avec
$$m_{tot} = 100g$$
